The browser is the primary tool for accessing the Internet, and having a powerful and efficient one can significantly increase your online experience. The browsers we use to surf the Internet offer several features that can differ significantly. We take a look at the most important ones, so you can choose which one you prefer. Internet Explorer Internet Explorer is the oldest and most popular browser for Windows. It is a web-browsing client, and can access and store data from HTML files. Security Internet Explorer's a good option if you work in an organization that has strict security standards. It includes several security features, such as Secure Sockets Layer (SSL), and Entrust DSS. Ease of use It's the easiest browser to use, mostly because of its clean interface. Because of its small size, you can access almost every website in a single tab without many problems. Privacy Internet Explorer is built in such a way that it doesn't collect data while you are browsing the web. Firefox Firefox is the modern browser, more polished and user-friendly than its counterpart, Internet Explorer. It is fast, and it won't slow down your computer. Security Firefox's security features are the most extensive, while its main drawback is that it does not protect the user's privacy as good as Internet Explorer. Ease of use It is easy to use, and the only fault is that you can see many other open windows next to the browser. Privacy The browser does not collect information, and you can use it safely. Safari Safari is a less secure browser, because it does not protect the user's privacy, and it doesn't offer as many security features. Ease of use The browser is fast, and also simple to use. You can quickly switch between open tabs or websites. Privacy Safari's security limits help you keep your privacy. Beside comparing the main features of the most common browsers, you can also take a look at a few handy tools that can help you keep your browser safe and up to date. Adguard Browser Adguard Browser is a modern browser, built by the company Adguard. It is fast, and very stable. One of

I am trying to kill a process using using the command net stop [processname] from a batch file, but it doesn't work. When I use the command alone, it works and says process has been stopped. I do not know why net stop won't work for me. How do I kill a process using the command

from within a batch file? For a better understanding, this should be copied and pasted into a command prompt: net stop and also into a batch file using the command: net stop The first command does not work on Windows 7 while the second command works. Mini Regedit is a lightweight Windows application built specifically for helping you enable or disable several Windows features on the breeze. It comes in handy especially when you share your computer with multiple users and you want to restrict their accesses to several system settings, such as Registry Editor and Task Manager. Plus, it may prove to be particularly useful for restoring some of functions that have been disabled by viruses or other malicious threats. The advantages of being portable Since this is a portable program, it is important to mention that it doesn't leave any traces in the Windows Registry. You can copy it on any USB flash drive or other devices, and take it with you whenever you need to block some system settings on the fly, without having to go through installation steps. Simplistic layout You are welcomed by a plain interface that allows you to carry out most operations with minimal effort. All settings are displayed in the primary panel, so it proves to be actually pretty easily to configure them. Main features Mini Regedit gives you the possibility to disable the Registry Editor, Task Manager, CMD, folder options, as well as system tray menu. What's more, you can make the utility reveal hidden files and system items, as well as lock the taskbar setting options. In order to activate all of the aforementioned settings comprised in this utility, you are required to select the items and press the "Apply Settings." Since it doesn't require much computer knowledge to work with this small app, even less experienced users can master the utility with minimum effort. During our testing we have noticed that Mini Regedit carries out a task quickly. As it would be expected from such a small utility, it remains light on system resources, so it doesn't hamper computer performance, nor interfere with other programs' functionality. Bottom line To sum things up, Mini Regedit offers a simple software solution when it comes to helping you enable or disable Windows features. NOTE: The description contains links to our website.
