Publisher Description DCP-o-matic is a very capable and quite easy to use app that can be the right choice for creating your own DCP using a variety of formats. DCP-o-matic is a cross-platform software program that provides you with the ability to create a digital cinema package from scratch using a wide range of media content such as video, audio, image, and sub-title files. The program is fully integrated with the most popular libraries like Windows Media Player, VLC Media Player, Kodi, and even more. DCP-o-matic is the first cross-platform DCP editor you can use on Windows, Mac, Linux and any other platform that supports the Java Runtime Environment. DCP-o-matic is a fully-automated DCP creation software that has been proven to produce high-quality and media-compliant DCPs using any type of media files (video, audio, subtitles and images). The program is straightforward to use and offers you many options to save a project in different formats, including the already available Bink and WebM video formats. Moreover, DCP-o-matic 3.4 lets you customize a project's appearance before saving it. Not only can you easily edit a project's color and effects, but you can also convert the source file format into

What's New in the?

Nowadays, it's easy to produce a professional and high-quality DCP for any occasion, whether it be a DVD release, a live event or a webcast. But with that comes a very steep learning curve. If you're a do-it-yourselfer, or just a casual user looking for a free, simple, and easy to use tool, then I'd highly recommend that you give DCP-o-matic a try. You may need to support the app in case it gets discontinued by the author.
